## **What you need to know about Carbon... Now**

### **Seminar Key Topics**

What soil carbon does for you

Building the carbon in your soil

Can we measure soil carbon? and

What do we need to know about soil carbon **NOW**, for the coming market?

### **Seminar program**

8.30am

**Registration and cuppa**

9.00am

**Guest Speaker—Alan Lauder (author of “Carbon Grazing”)**

Alan has dedicated his most recent years to uncovering the unknowns of the carbon cycle within agricultural and specifically, the grazing industry. He occupies a unique position in the carbon debate, after 30 years of operating a successful rural operation and ongoing interaction with the scientific community. This practical experience has proved invaluable when united with the understanding of the country's leading scientists. His point of difference as seen by those in the scientific community, is focusing more on carbon flows, while the current debate is preoccupied with carbon stocks. With carbon, once you understand the flows, you see the dynamics of the whole landscape and how it functions.

10.30 am

**Smoko**

11.00am

**On-ground demonstration of carbon building products and methods**

12.30—Lunch

1.30pm—3.00

**Question and Answer session**

**(Don't forget to bring your list of carbon questions with you!)**

**Where to from here!**

3.00pm—Afternoon tea

**Premium Practice in  
Burnett Land Management**

**A South East Burnett Landcare Group  
Caring for Our Country project**
