

Building Better Soils for Horticulture

Are you interested in innovative approaches to managing soil, improving soil health, and building soils that will support farming for generations to come?

On-farm practice changes that will lead to improved sustainability and healthier soils are eligible activities for BETTER CATCHMENTS incentive funding.

BETTER CATCHMENTS incentive funding for up to \$3,000 is currently available to horticulture producers in the Burnett Mary Region. Producers interested in becoming involved in the BETTER CATCHMENTS program are invited to attend **one** of the following workshops. Attendance at either of the workshops is an eligibility requirement of the BETTER CATCHMENTS incentive program. Incentive guidelines and application forms will be provided at the workshops.

Keynote Speaker

Brett Irvine of *Carbon Chasers Agriculture*, is an internationally respected agronomist with a passion for Biological Farming.

Brett travels the world providing advice to a diverse range of conventional and biological crop farmers and will be presenting at both workshops on the soil foodweb cycle, improving productivity, and introducing biological farming into current management practices.
