

Chopper Roller Field Day

(Re-scheduled)

Friday 20th April

A demonstration of cost-effective thinning in over-stocked spotted gum regrowth forest. The chopper roller is used to cut and flatten woody debris in strips through dense regrowth forest, creating access for management activities between the strips. The main advantage of the chopper roller is improving access for thinning out the retained forest between strips. In the right circumstances the chopper roller can also improve the economics of thinning, improve access for fire management and speed-up the breakdown of large woody harvest debris. The chopper roller is highly manoeuvrable and, with appropriate forest management practices can help landholders improve the productivity and health of their regrowth forests.

Location: BJ Gentry's eastern property off Manumbar Road, Nth of Nanango (Look for the 'Field Day' signs on Manumbar Road)

Time: 9.00am - 3.00pm

RSVP: pfsq@bigpond.com or

Ph: 54836535

What to bring: Bring along a packed lunch, a water bottle and a chair. Morning tea will be provided. You will also need to wear closed shoes.
