

# ***Gully Erosion Rehabilitation***

## ***Farm Walk, Irrigated cropping***

Gully erosion has become a very significant problem across the Burnett region since the flooding in 2010/11 and 2013. The active gully erosion has in many cases damaged fences, dams, waterways, roads, cultivation and other infrastructure.

With the assistance of State Government funding BMRG has established a number of gully rehabilitation demonstration sites. Please join us inspecting and discussing the various constructions, materials and rehabilitation methods at three of these sites. (See Map on back)

### **Agenda for the day:**

- 9.30: Introduction John Day, BMRG
- 9.40: View and discuss the construction methods at Grant Anderson's site Marshlands.
- 10.30: Move on to Darryl Harch's property to view and discuss his farm water management layout including levelling flood gullies and improved diversion design. Morning tea on the run.
- 11.00: Move on to Scott Jones property at Winderera to view and discuss his irrigation dam bywash gabion weir gully rehabilitation.

**Date :** Wednesday,  
25 March 2015

**Time:** Starts 9.30 am  
sharp and ends at  
1.00 pm. approx.

**Where:** "Marshlands", 620  
Hivesville Road,  
Marshlands.
